

AMENDMENTS TO THE CLAIMS

Please amend the claims so that they read as follows:

Claims 1-16 (Canceled).

Claim 17 (Previously Presented): A process for preparing a secondary standard comprising the steps of:

- (a) mixing one or more viscosity changing polymers and at least one dye; and
- (b) gelling the mixture to form the secondary standard.

Claim 18 (Previously Presented): A process for preparing a container for calibrating an instrument comprising the steps of:

- (a) dispensing one or more viscosity changing polymers and at least one dye into a container to form a mixture; and
- (b) gelling the mixture to form a secondary standard.

Claim 19 (Original): The process of claim 18, wherein step (a) comprises the steps of:

- (i) mixing the viscosity changing polymers and the dye; and
- (ii) dispensing the mixture into the container.

Claim 20 (Original): The process of claim 18, wherein the viscosity of the viscosity changing polymer being dispensed ranges from about 1 to about 1,000 cP.

Claim 21 (Original): The process of claim 18, wherein the viscosity changing polymer is a pH responsive polymer.

Claim 22 (Original): The process of claim 21, wherein step (b) comprises increasing the pH of the mixture sufficiently to gel the mixture.

Claim 23 (Original): The process of claim 22, wherein the mixture in step (a) has a pH of less than about 4.5 and step (b) comprises increasing the pH to at least about 5.

Claim 24 (Original): The process of claim 22, wherein step (b) comprises diffusing an alkaline gas through the mixture.

Claim 25 (Original): The process of claim 24, wherein the alkaline gas is ammonia gas.

Claim 26 (Original): The process of claim 22, further comprising the step of:

- (c) neutralizing the gel formed in step (b) to a pH of from about 6 to about 8.

Claim 27 (Original): The process of claim 18, wherein the viscosity of the viscosity changing polymer in the gel in step (b) is at about 10,000 cP.

Claim 28 (Currently Amended): A method for calibrating an instrument comprising the step of calibrating the instrument with ~~the standard of claim 1 a secondary standard, the standard comprising:~~

(a) one or more viscosity changing polymers; and

(b) at least one dye in an amount effective to simulate a known amount of analyte.

Claim 29 (Original): The method of claim 28, wherein the instrument is a spectrometer, multi-well plate reader, or imager.

Claim 30 (Previously Presented): The process of claim 17 consisting essentially of:

- (a) mixing one or more viscosity changing polymers and at least one dye; and
- (b) gelling the mixture.

Claim 31 (Previously Presented): The process of claim 18 consisting essentially of:

- (a) dispensing one or more viscosity changing polymers and at least one dye into a container to form a mixture; and
- (b) gelling the mixture.

Claim 32 (Canceled).
